

STEPS FOR CREATING A TREEMAP

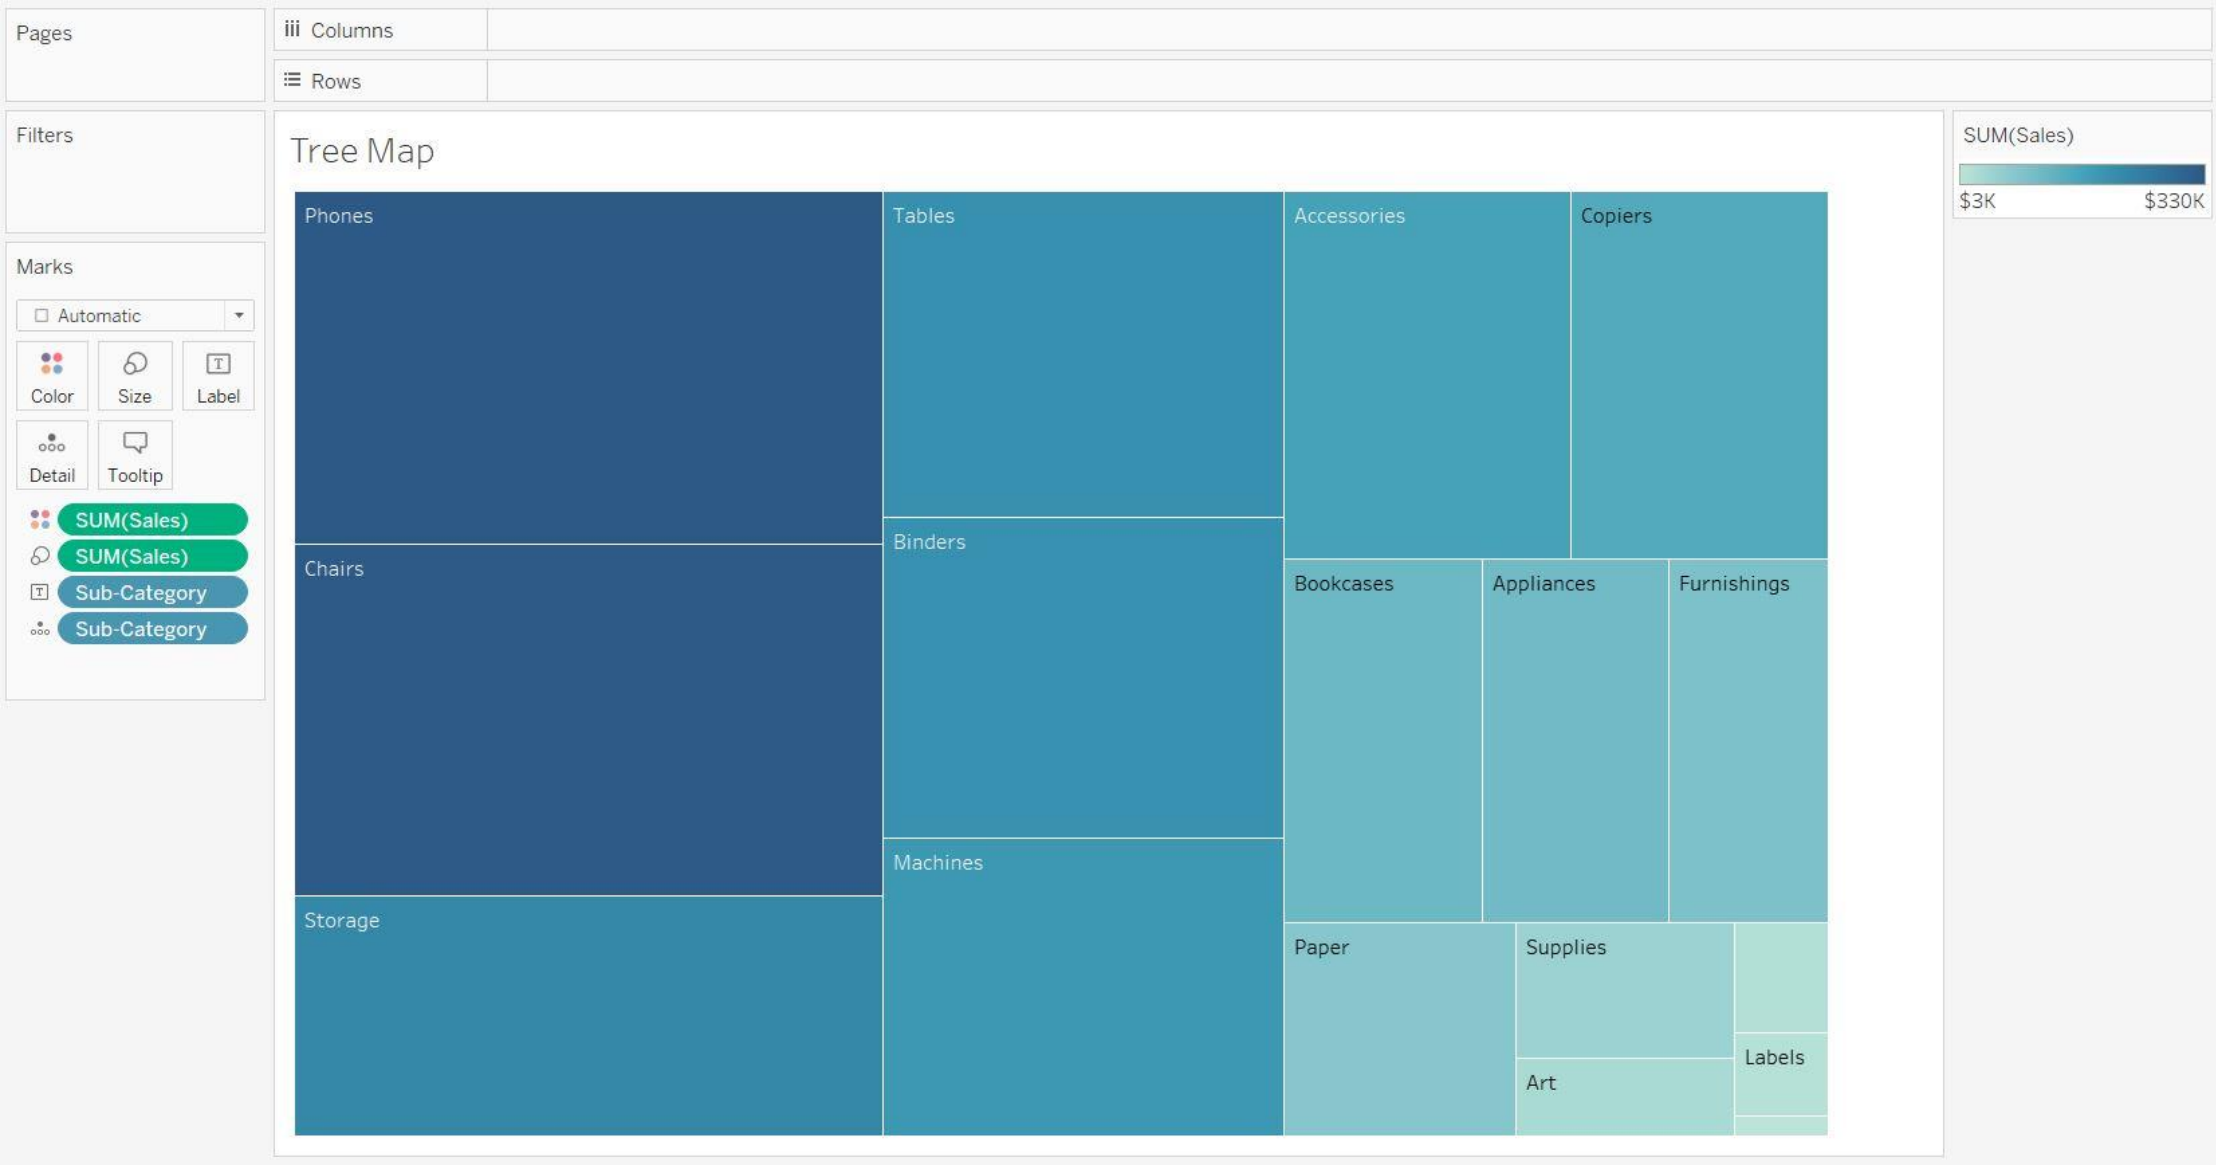

STEP 1: Drag and drop any Measure e.g.: **Sales** to the **Color** and **Size** on the **Marks** card

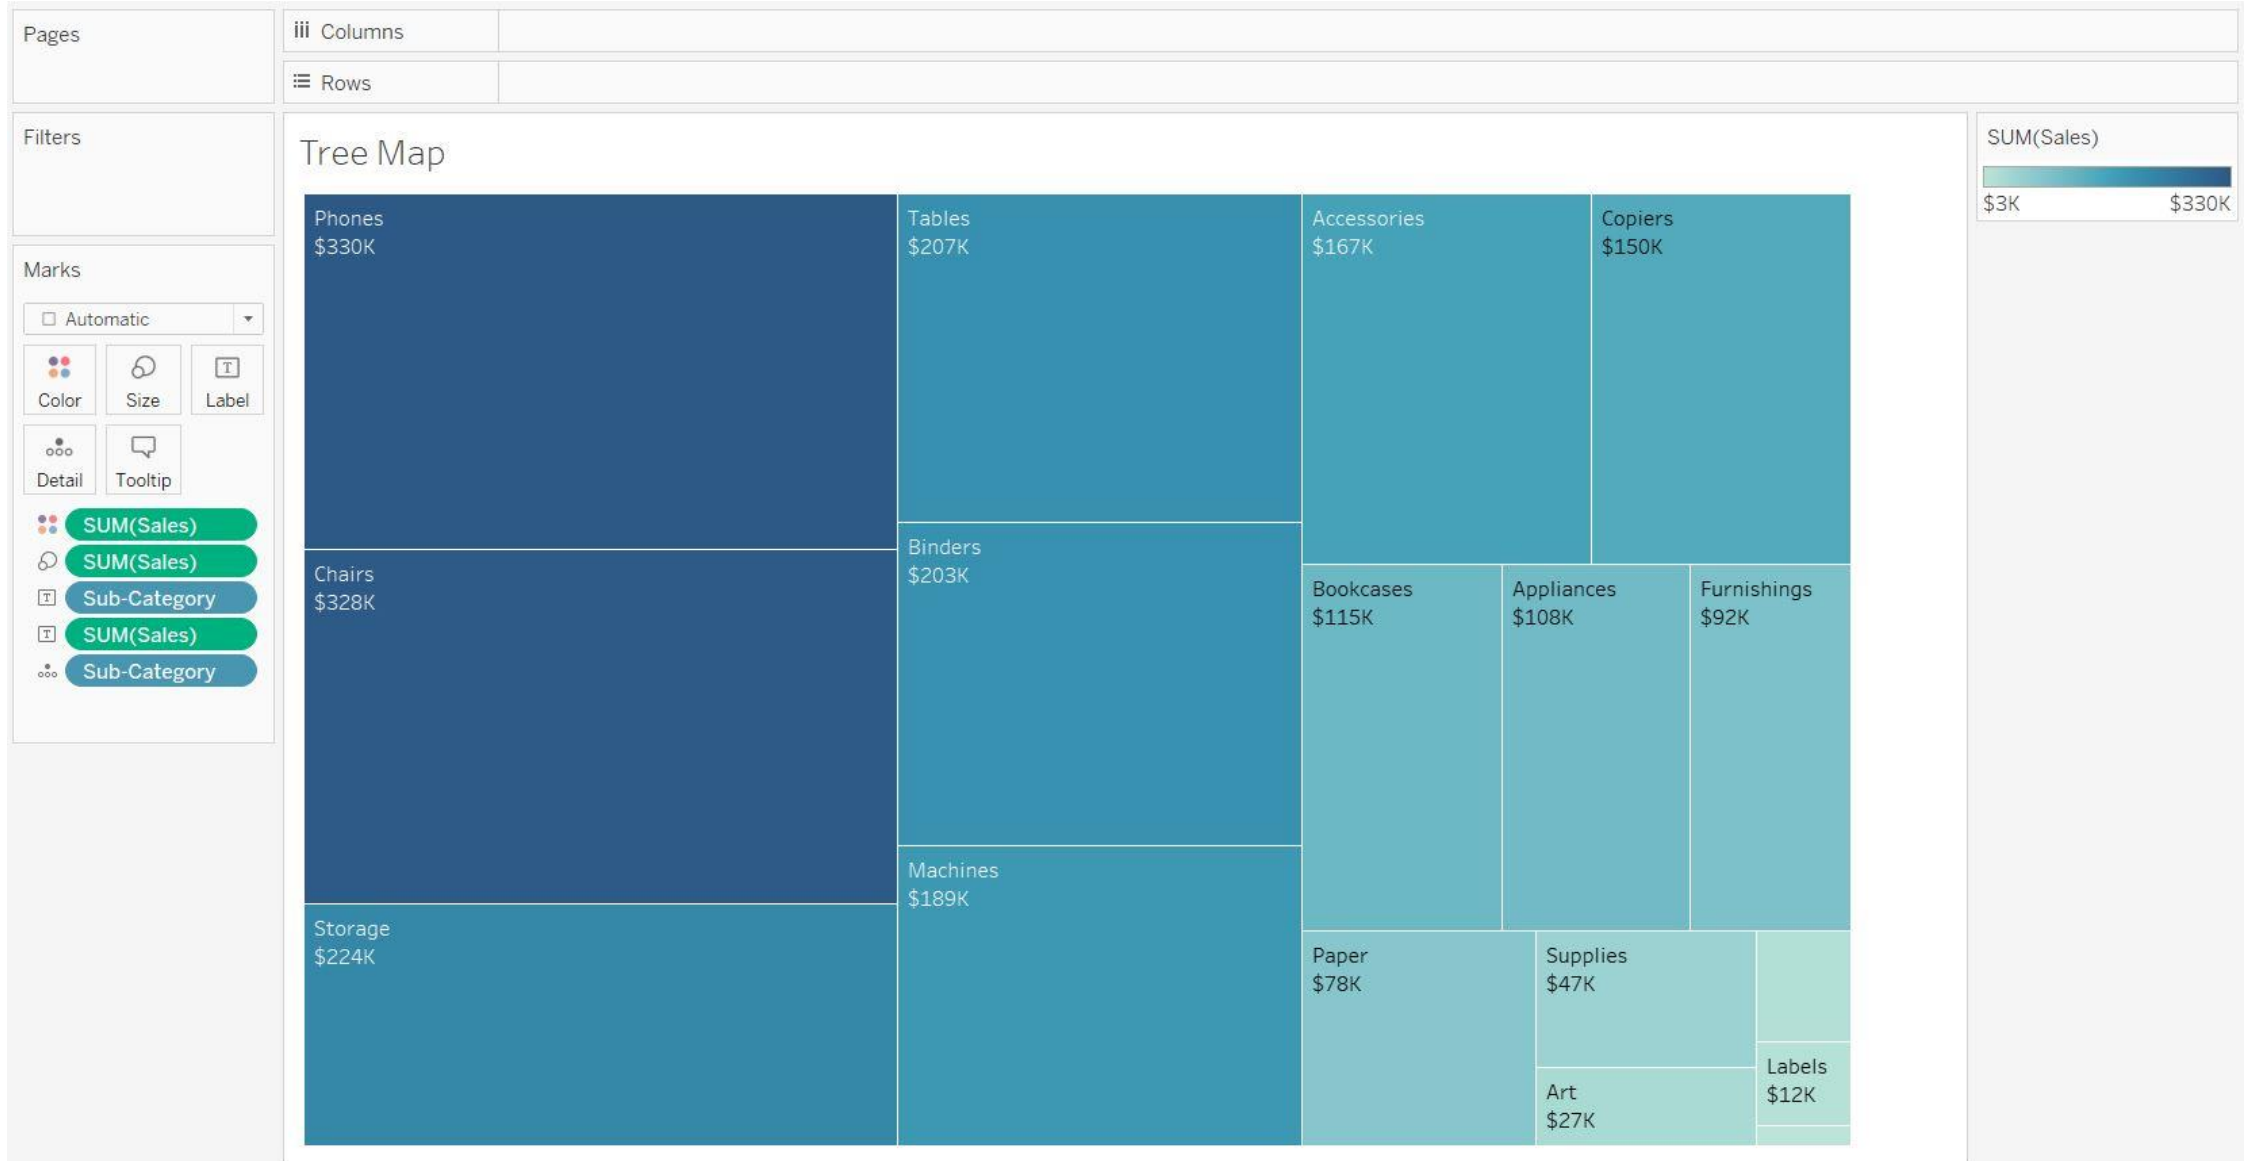

STEP 2: Drag and drop any Dimension e.g.: **Sub-Category** to the **Detail** on the **Marks** card

STEP 3: Drag and drop the same Dimension e.g.: **Sub-Category** to the **Label** on the **Marks** card

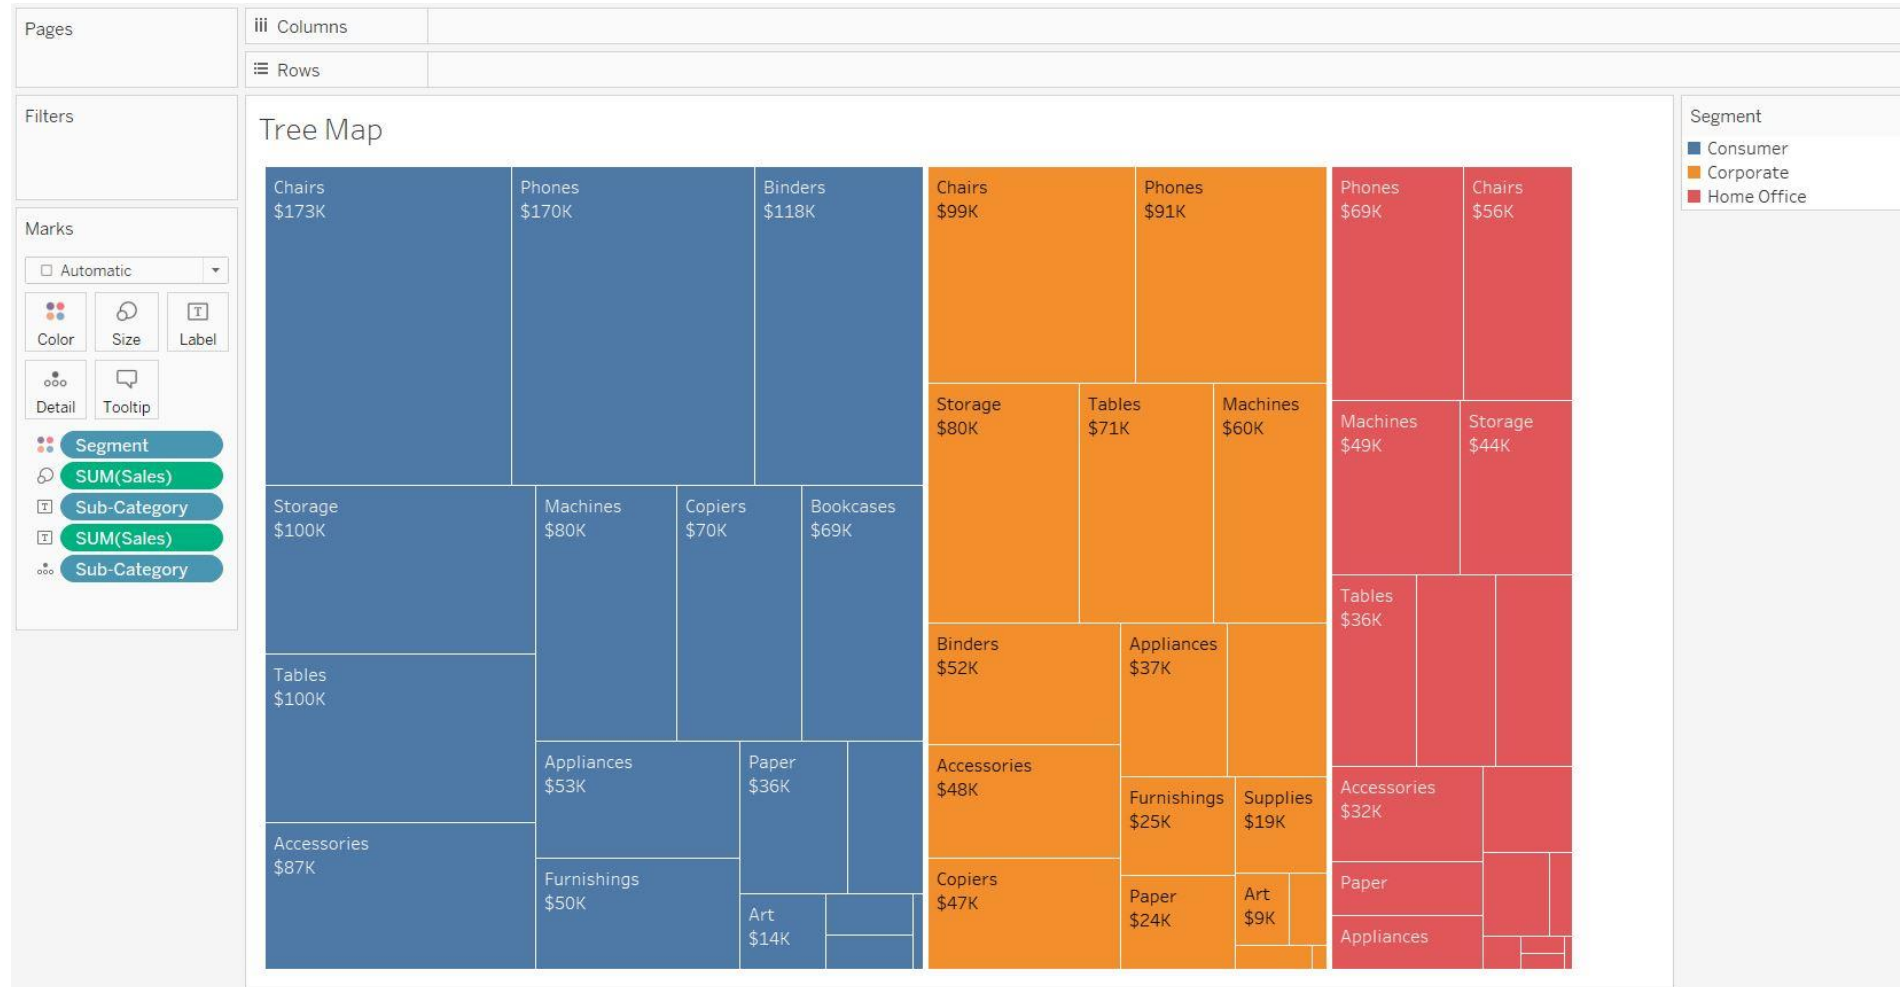

STEP 4: Drag and drop the same Measure e.g.: **Sales** to the **Label** on the **Marks** card
Phones have the highest Sales with the largest size of rectangle
as well as the darkest color

STEP 5: If required we can divide this view further based on another Dimension e.g.: **Segment**

Drag and drop 2nd Dimension e.g.: **Segment** to the **Color** on the **Marks** card
Please note that a **Color Legend** appears in the Top Right side of the view

STEP 6: Now the Treemap view is complete

NOTE: There might be few sections that are blank as Tableau does not overlap the labels. The labels will be visible in Tooltip when we hover over the specific items.
