

DRAG AND DROP ANALYTICS

Tableau provides the option to **drag and drop** many analytic features/items e.g: reference lines, box plots, trend lines forecasts, and other items into our view from the **Analytics** pane, which appears on the left side of the workspace.

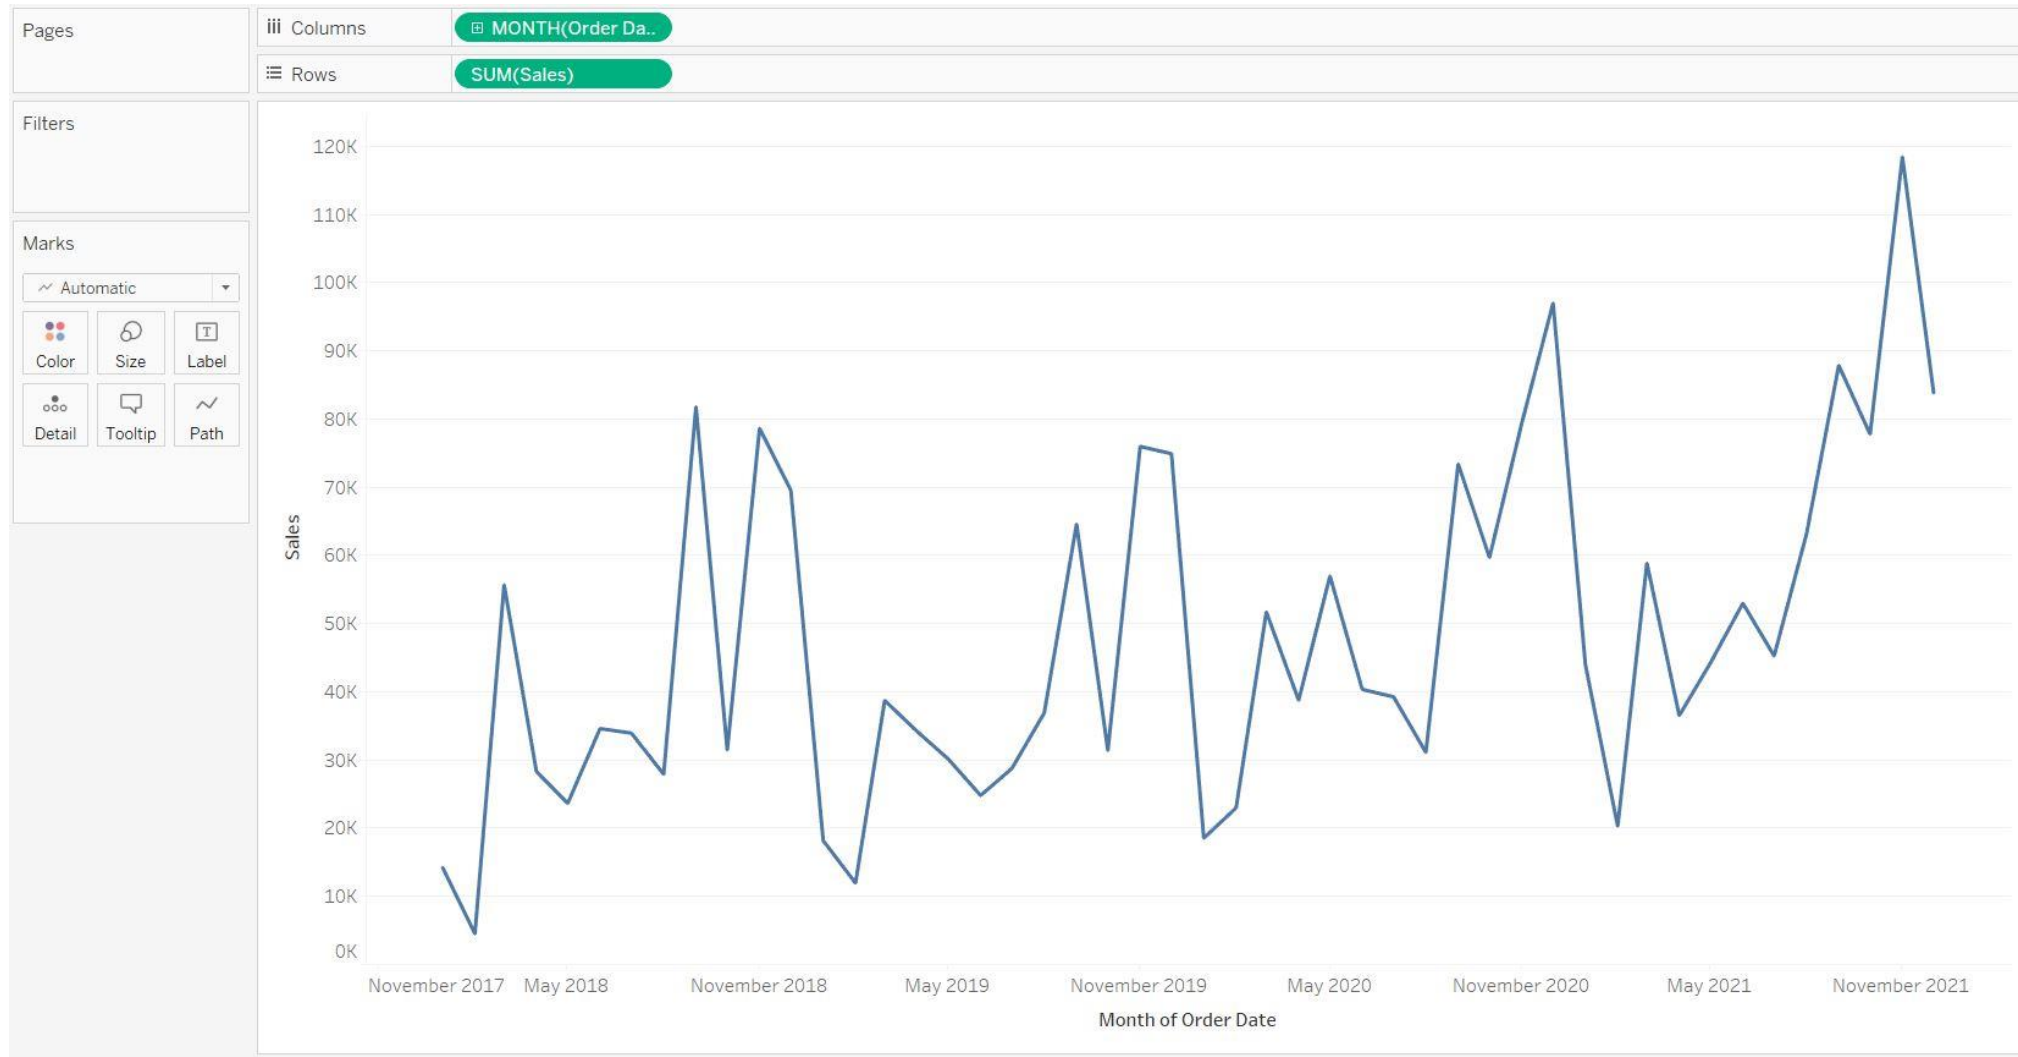

We can toggle between the **Data** pane and the **Analytics** pane by clicking the tabs at the top of the side bar.

We can delete an analytics object from the view by **dragging** the object off the view.

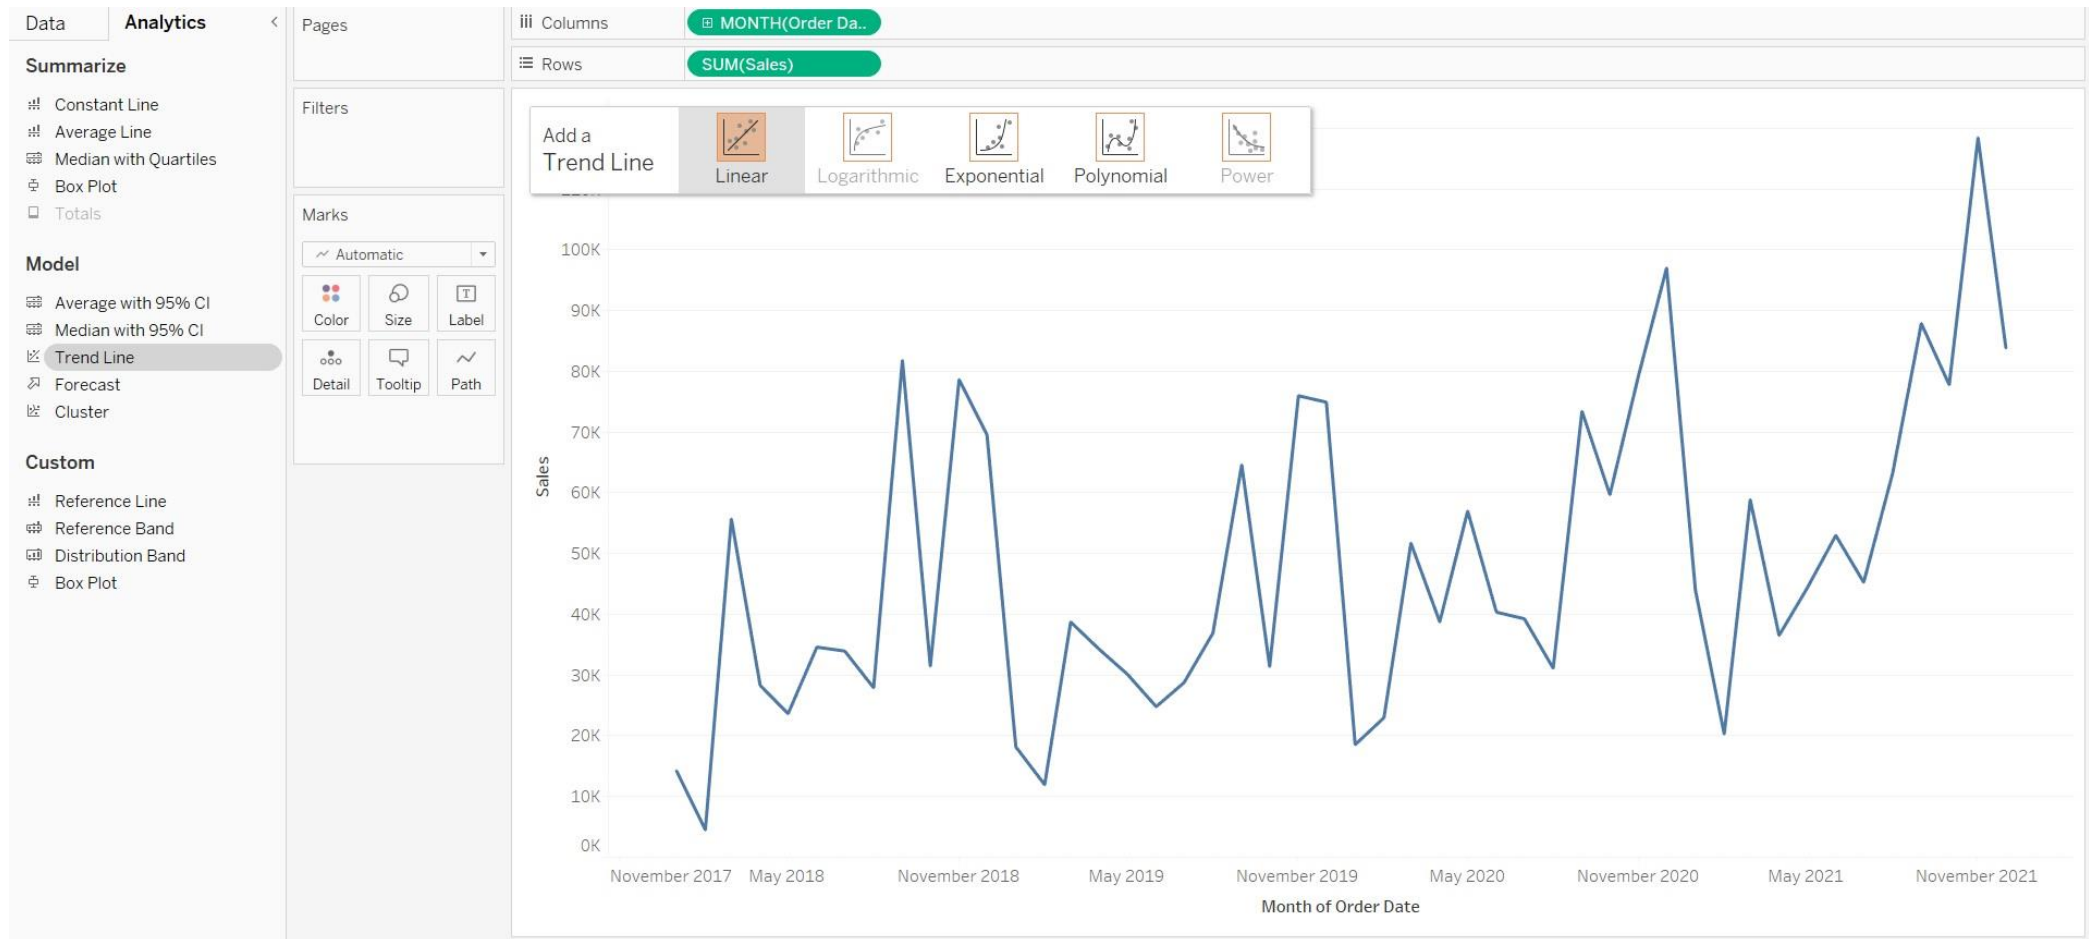

DRAG AND DROP ANALYTICS

Step 1: Let us assume that we have the below mentioned line chart visual

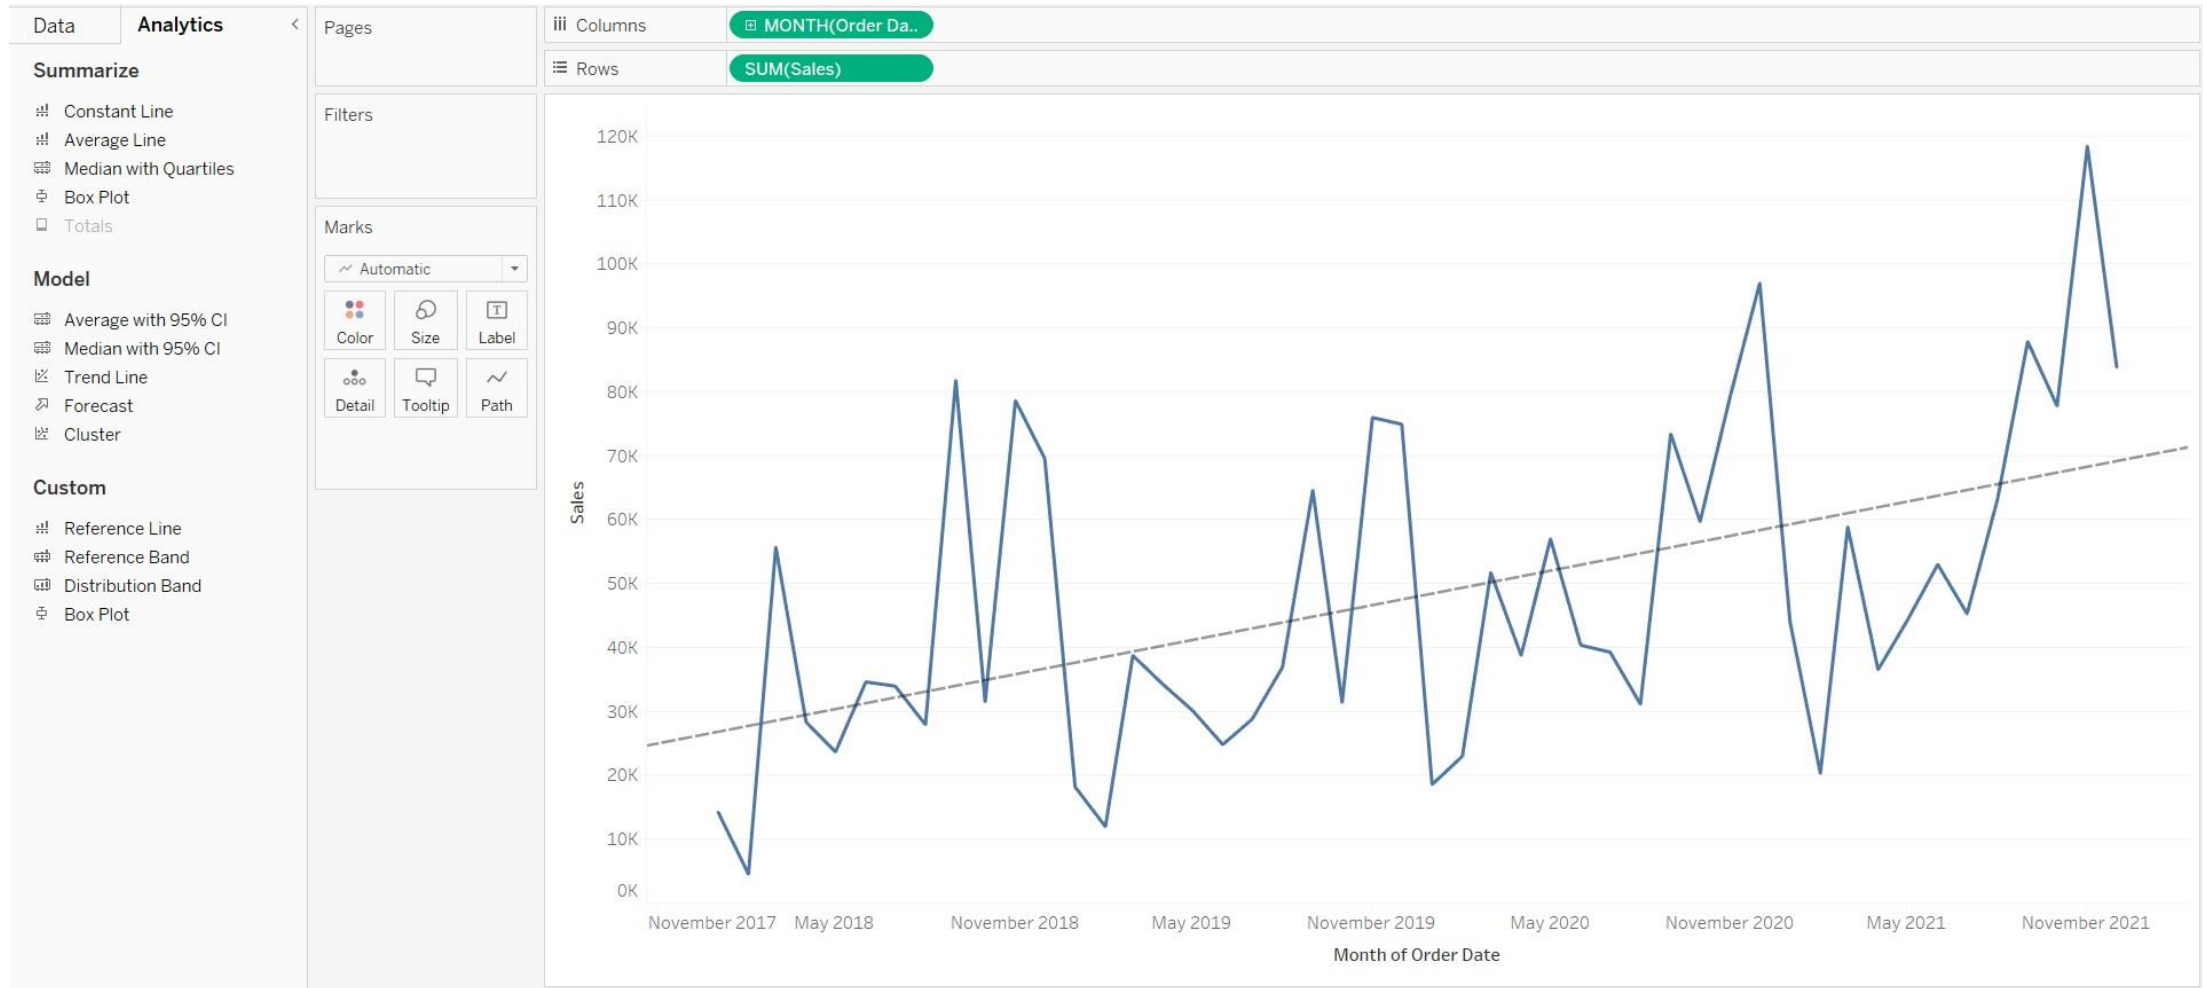

DRAW AND DROP ANALYTICS

Step 2: To add an item e.g: **Trend Line** from the **Analytics** pane, drag it into the view. When we drag an item from the **Analytics** pane, Tableau shows the possible destinations for that item. The range of choices varies depending on the type of item and the current view. Let us drop into **Linear**

DRAG AND DROP ANALYTICS

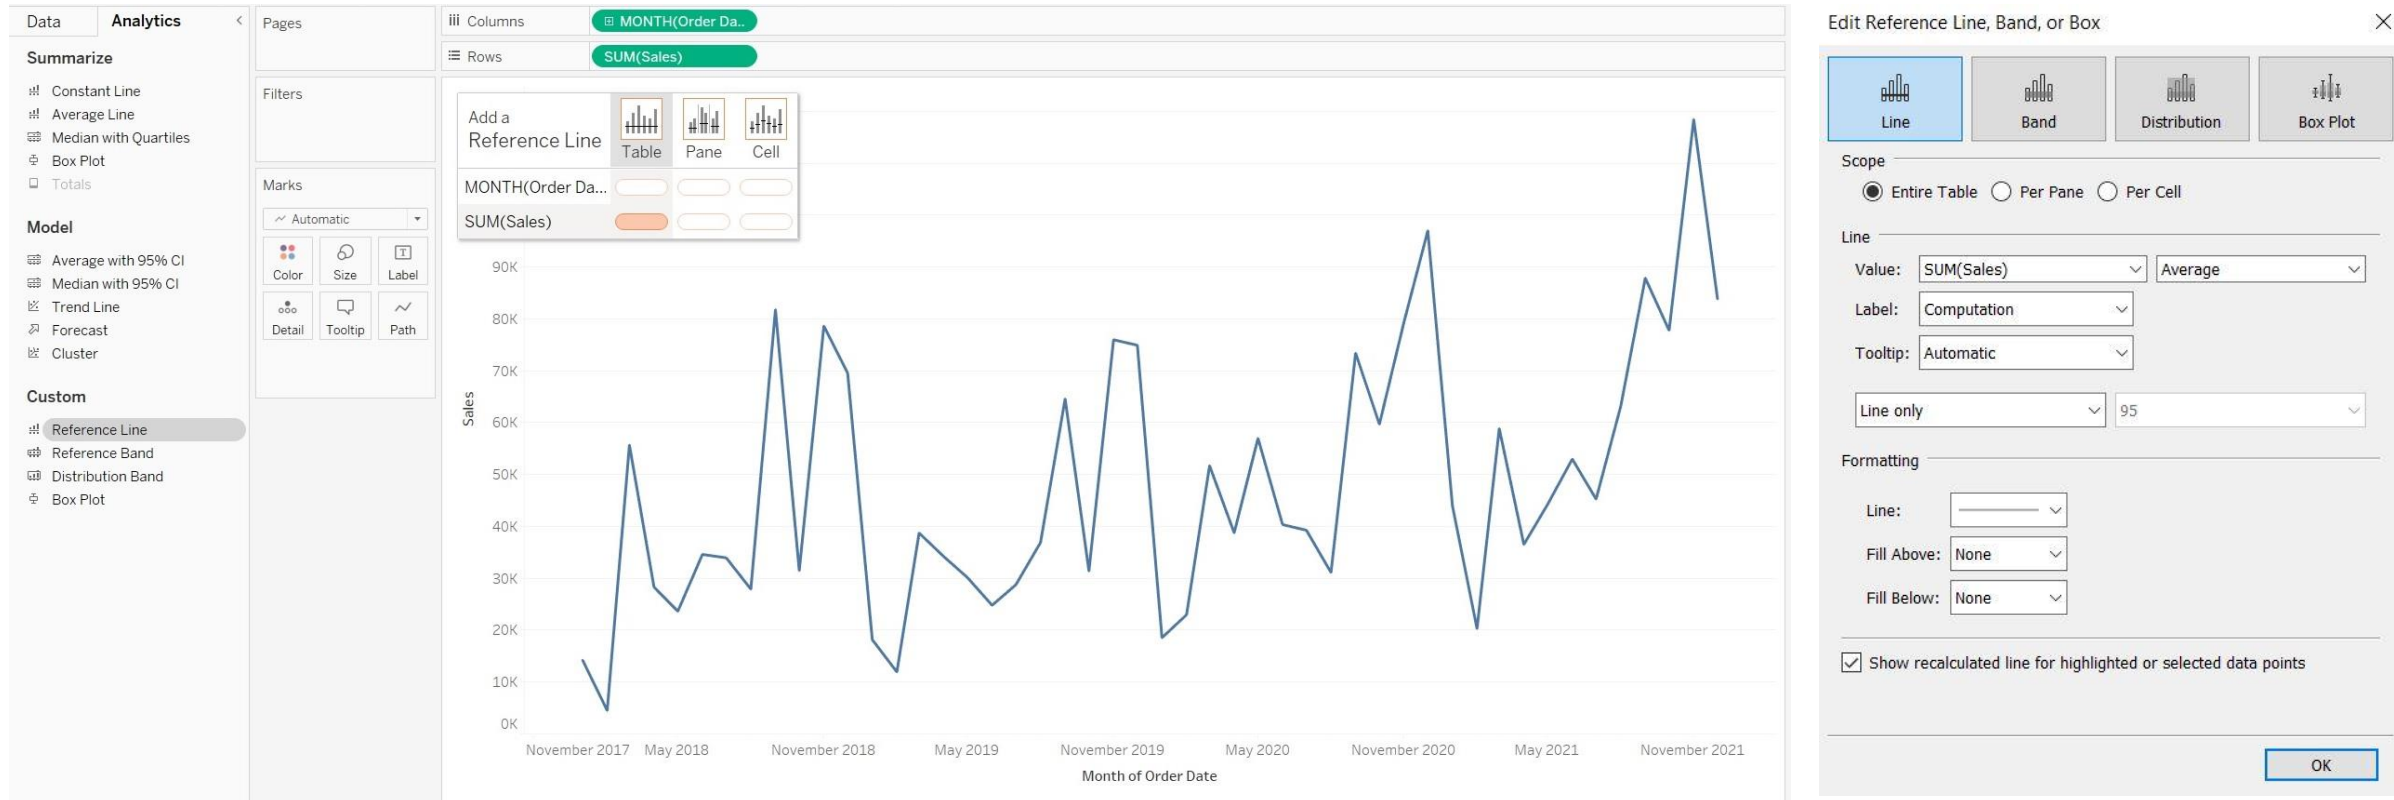

Step 3: Now we see the **Linear Trend Line** in the view

NOTE: We can delete the **Trend Line** from the view by selecting and **dragging** the line off the view.

DRAG AND DROP ANALYTICS

Step 4: We can add any other item e.g: **Reference Line** from the **Analytics** pane in the same manner. We may get an additional dialog box for selecting the options

NOTE: We can delete all Analytic items from the view by selecting and **dragging** the items off the view.
